DataChambers to Build Second Data Center, Expand Existing Facilities

- Projects will more than double the company's capacity to host and manage client systems

Winston-Salem, N.C. (May 11, 2009)

The North Carolina-based technology firm DataChambers today announced plans to build a second data center on its 80-acre Winston-Salem campus. In addition, the company plans to expand its existing data center for the second time in less than a year.

Together the two projects represent an investment of more than \$7 million and will more than double the company's capacity to serve clients.

“We’re responding to a strong growth in our business - fueled by companies trying to do more with limited budgets,” said Nicholas Kottyan, CEO of DataChambers. “Typically our clients find we can deliver a level of service they simply are unable to replicate affordably on their own.”

From its current data center, DataChambers serves more than 110 firms in 28 states. Clients use the facility to house both backup systems and the primary data networks that underpin their business.

To expand capacity, DataChambers will create a new 20,000-square-foot data center from a series of vacant rooms in the former Western Electric manufacturing plant where the company makes its home. The space is located 18 feet underground in a blast-resistant structure. Interior demolition is now underway, and construction is expected to begin in the fall.

DataChambers also is expanding its existing data center to maximum capacity by reconfiguring walls and adding another 1,500 square feet of space. This is the second expansion of the facility in less than a year to accommodate new clients, and work is already underway.

Prime contractor for both projects is Landmark Builders of Winston-Salem. Other North Carolina vendors involved include Adams Electric, Clear Site Demolition, NEO Corporation and Systems Contractors.

About DataChambers, LLC:

DataChambers is a full-service information technology and managed services provider specializing in electronic data storage, 24x7 managed information technology solutions,

secure co-location services for mission-critical information technology infrastructure, secure tape vaulting, and offsite records storage and management.
